

Editorial

This Special Edition of Civil Engineering Dimension (CED Vol. 14, No.3) is aimed to publish valuable papers that have been presented in “The Benjamin Lumantarna Symposium on Structural Engineering and Construction Technology”, in Surabaya, Indonesia, on 14 September 2012. The symposium was held in recognition of Prof. Dr. Benjamin Lumantarna’s outstanding contribution to Structural Engineering, Construction Technology, and to his four decades service in Civil Engineering Education at Petra Christian University, Surabaya, Indonesia. A number of long time friends, colleagues and former students of Prof. Lumantarna were invited to present papers in the symposium.

All the papers presented in the symposium were already printed in the symposium proceeding, entitled “Developments in Structural Engineering and Construction Technology”, ISBN 978-979-99765-1-2; however the circulation is very limited. Remembering the great wealth of knowledge contained in the papers that should be benefitted by wider community, on the basis of authors’ approval we decided to publish the papers in this Special Edition of CED. Several papers have been updated by the authors to better suit the need of the readers.

We do hope this Special Edition of Civil Engineering Dimension accomplishes the purpose.
